MSc Sports Performance Analysis student at Bournemouth University with a BSc (Hons) in Sport & Exercise Science. Experienced in designing performance analysis workflows, developing KPI models, and integrating multi-disciplinary data into clear, actionable insights. Skilled in translating complex performance information into practical recommendations for coaches and sport science teams. Seeking an entry-level Performance Analyst role within professional or academy sport where I can contribute to evidence-based performance decision-making.

Education

MSc Sports Performance Analysis – Bournemouth University (Current)

BSc (Hons) Sport & Exercise Science – University of Portsmouth (2024)

Applied Performance Analysis Projects

Performance Analysis Workflow Design (Football Environment)

- Designed and justified a personalised performance analysis workflow aligned with coaching philosophy and performance context
- Developed and validated a “What It Takes to Win” performance model aligned with coaching priorities
- Conducted intra- and inter-rater reliability testing using Hudl Sportscode and Excel
- Critically evaluated existing workflow models and implemented evidence-informed improvements
- Produced coding windows, structured reports, and video playlists using Hudl Sportscode to support match feedback and tactical discussions

Multi-Disciplinary Data Integration Project (Python)

- Integrated S&C, physiology, medical, psychology, and coaching datasets into a unified and repeatable data structure

- Built an automated Python workflow to clean, merge, and process weekly performance data
- Applied structured quality control processes including error checking and consistent variable naming
- Developed cross-disciplinary visualisations using machine learning to link training load, readiness, and risk indicators
- Delivered tailored insights to coaches, sport scientists, and a Performance Director, defending analytical decisions in a live panel setting

Power BI Dashboard – Sport Scientist Focus

- Designed a performance readiness dashboard tailored to a sport scientist audience
- Applied structured data modelling, DAX calculations, and interactive filtering
- Analysed six-week performance trends to assess athlete readiness and highlight potential concerns
- Delivered both technical rationale and applied recommendations in a live presentation
- Adapted to real-time data adjustments and responded confidently to stakeholder questioning

Multi-Disciplinary Intelligence Hub (Python & Streamlit)

- Engineered a centralized, password-protected web application using Streamlit to serve as a real-time decision-support hub for a Multi-Disciplinary Team (MDT)
- Developed automated data pipelines to ingest and normalize disparate datasets, including GPS (Pitch), Gym (S&C), Wellness, and Medical/Injury records
- Programmed complex performance algorithms, including Acute:Chronic Workload Ratios (ACWR), Efficiency Indices, and a weighted "Athlete Readiness" score
- Designed bespoke UI/UX interfaces for specific stakeholders (Coaches, Analysts, and Medical staff) to provide tailored tactical and physiological insights
- Leveraged Plotly and Graph Objects to create interactive radar charts and load-response gauges, translating raw data into actionable "Smart Recommendations"
- Synthesized longitudinal injury data with mechanical loading markers to produce automated clinical audits and post-injury return-to-play assessments

Relevant Experience

Performance Analyst – BU Men's 2nd Football Team

- Designed and implemented match coding templates in Hudl Sportscode aligned with team KPIs
- Analysed performance trends including possession phases, transitions, and chance creation
- Developed post-match Power BI dashboards to support tactical debriefs
- Delivered visual feedback to coaching staff to inform training design and match preparation

Data Science & Visualisation Analyst (Placement)

British Obstacle Sports x Bournemouth University

- Analysed competition datasets from multiple UK national obstacle course racing leagues to support accurate athlete rankings and standings.
- Designed clear and engaging data visualisations/dashboards using tools such as Power BI and Excel for online publication.
- Produced monthly performance summaries and insights for the British Obstacle Sports Technical Committee.
- Maintained data accuracy, consistency, and version control while collaborating remotely with stakeholders across sport operations.

Applied Sport Science Support

- Collected and analysed physiological data during cycle ergometer testing
- Identified fatigue and performance trends to support training recommendations
- Assisted in laboratory-based monitoring of physiological responses to training stimuli

Football Coaching Experience

- Planned and delivered structured training sessions including warm-ups, technical drills, and small-sided games
- Applied analytical insights to inform session design and performance focus

Technical Skills

Performance Analysis Software: Hudl Sportscode (Level 1 Certified, Level 2 in progress; event coding, visual outputs, telestration, playlists)

Programming & Data Processing: Python (data cleaning, merging, automation), Excel

(advanced formulas, pivot tables)

Data Visualisation: Power BI (interactive dashboards, KPI tracking, DAX calculations)

Performance Modelling & Validation: KPI development, intra-/inter-rater reliability testing

Data Integration: Multi-source dataset merging and structured quality control

Certifications

Hudl Sportscode Level 1

Programming Using Python (Santander)
