Professional Summary

MSc Sports Performance Analysis graduate with a strong quantitative background in Sport & Exercise Science. Technically proficient in Python and Power BI, with a proven track record of transforming complex, multi-source datasets into interactive dashboards and actionable insights. Experienced in building automated data pipelines and decision-support tools that bridge the gap between technical data science and non-technical stakeholders. Seeking a Data Analyst or Junior Data Scientist role where I can apply statistical modeling and visualization skills to drive evidence-based decision-making.

Technical Skills

- **Programming & Tools:** Python (Pandas, NumPy, Matplotlib, Plotly), Google Colab, Streamlit (Web App Development).
 - **Data Visualisation:** Power BI (Advanced DAX, Interactive Dashboards, KPI Tracking), Excel (Advanced Formulas, Pivot Tables).
 - **Statistical Analysis:** Quantitative Research Methods, Linear Regression, Reliability Testing, Multi-disciplinary Data Integration.
 - **Database & Workflow:** Data Cleaning, Automated ETL (Extract, Transform, Load) Pipelines, Version Control.
-

Technical Data Projects

Multi-Disciplinary Intelligence Hub (Python & Streamlit)

- Engineered a centralized, password-protected web application using Streamlit to serve as a real-time decision-support hub for high-performance teams.
- Developed automated data pipelines to ingest, normalize, and merge disparate datasets (GPS, S&C, Wellness, and Medical records) into a unified structure.
- Programmed complex algorithms to calculate performance ratios and a weighted "Readiness Score," translating raw data into "Smart Recommendations."
- Designed bespoke UI/UX interfaces to provide tailored insights for different stakeholder groups (Management, Technical, and Medical staff).

Automated Performance Workflow (Python & Machine Learning)

- Built an automated Python workflow in Google Colab to clean, merge, and process weekly performance datasets, significantly reducing manual data entry time.
- Applied machine learning principles to link various risk indicators and identify trends in readiness and workload.
- Delivered technical rationale and defended analytical decisions in live panel settings to senior directors and stakeholders.

Power BI Analytics Dashboard (Data Modeling & DAX)

- Designed a high-level performance readiness dashboard utilizing structured data modeling and complex DAX calculations.
- Analyzed longitudinal trends to highlight potential risks and assess organizational readiness.
- Presented data-driven case studies, adapting technical findings into clear, concise recommendations for non-technical audiences.

Professional Experience

Data Science & Visualisation Analyst (Internship)

British Obstacle Sports (Remote)

- Analyzed competition datasets from multiple national leagues to support accurate athlete rankings and standings.
- Designed and published interactive Power BI dashboards for external stakeholders, ensuring high data accuracy and version control.
- Produced monthly performance summaries for the Technical Committee, identifying key growth trends and performance markers.

Data & Performance Analyst

BU Men's 2nd Football Team

- Designed and implemented data collection templates to track key performance indicators (KPIs) against organizational goals.
- Leveraged Power BI to create post-event tactical debriefs, using data to inform future strategy and resource allocation.
- Synthesized complex performance trends into visual feedback for coaching staff to optimize preparation.

Education

- **MSc Sports Performance Analysis** – Bournemouth University (Current)
 - **BSc (Hons) Sport & Exercise Science** – University of Portsmouth (2024)
-

Certifications

- **Programming Using Python** (Santander)
- **Hudl Sportscode Level 1 & 2** (Applied Performance Software)
